

Trimax Structural Lumber.

It's the only patented high-performance construction material available, and it's perfectly suited to load-bearing applications such as posts, beams and joists used for decks, docks and marinas.

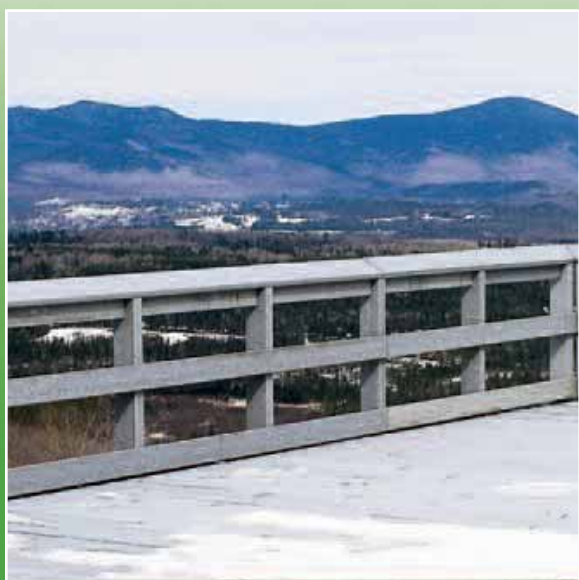

- Easy to install – Trimax Structural Lumber sections are assembled with standard tools and stainless steel screws.
- Trimax products can be cut with standard saw blades.
- Patented and code-approved for most uses.

**Strong. Durable.
Weather resistant.**

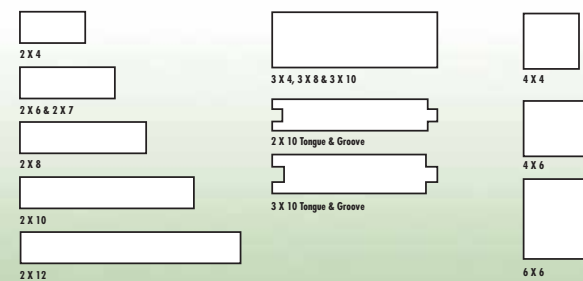

Trimax Structural Lumber is ideal for many outdoor applications, including:

- Structural posts, beams and joists
- Docks and seawalls
- Structural pilings
- Boardwalks and beach-access walks
- Dock fenders
- Marine and pedestrian bridges
- Channel markers
- Wales, camels and guard rails

(other colors available by special order)

strong?

TRIMAX STRUCTURAL LUMBER

“Once and Done” Construction

Why choose Trimax?

Trimax Structural Lumber is the ideal, high-performance product for load-bearing applications such as posts, beams and joists used in decks, docks and marinas.

And since there are no trees harvested to make Trimax, you can feel good about the positive impact your project will have on the environment.

Incredibly durable.

Trimax is made of a patented formula of 100% recycled plastic called HDPE – the type found in a number of everyday recyclable products such as milk jugs – and a strengthener called fiberfill. It is uniquely suited for outdoor applications that require superior strength, durability and resistance to even the most extreme weather conditions.

Remarkably attractive.

You’d never know Trimax is a wood-free product from its appearance. In fact, it looks so much like wood, you may have to tell people they’re standing on recycled plastic.

Environmentally friendly.

No wood in our products means significant benefits to the environment, as does the removal of millions of

pounds of plastic from our waste stream to make Trimax Lumber. Simply put – what you take to the curb for recycling ends up in the deck or dock you’ll enjoy for years to come.

Long lasting.

Build it once and you’re done. Trimax Structural Lumber is impervious to moisture, fungi, marine borers, oils and fuels.

Easy to maintain and handle.

Trimax installs and cuts like natural wood using conventional carpentry tools and methods. It won’t rot, split, splinter,

check or stain. And maintenance is a breeze – no scrubbing, staining, sanding, sealing or power washing necessary.

Choose from numerous profile options.

A warranty you can also feel good about.

Our industry-leading 25/2 Limited Warranty also sets Trimax apart, covering both product and labor. For specific warranty details, please call **1-800-666-5207** or visit **www.trimaxdecking.com**
